

The ContinuSeal gasket can be installed onto a Durafil ES³ or Durafil Compac filter. The addition of this gasket creates a continuous seal around the entire perimeter of the holding frame.

The ContinuSeal gasket is an injection molded TPE polymer that press fits into the profile on both the Durafil ES³ and Durafil Compac headers. The innovative double-fin design enables the gasket to conform precisely to the inner contour of the holding frame while effectively sealing against the rear flange. The double-fin design establishes two sealing barriers, which assist in minimizing filter bypass.

The ContinuSeal gasket is an ideal addition in applications where preventing bypass is crucial.

- Compatible with 24" x 24" Durafil ES³ or Durafil Compac filters
- Continuous design with no joints or gaps
- Can be removed and reused
- Double-sealing fins

Note: The ContinuSeal gasket will not improve the efficiency of the filter.
